The burners shown are the No. 82 Welsbach gas burner and are not included in above prices. See page 12, No. 9 catalogue.

THE following fixtures embrace the patent Wakefield principle which permits any body to be used either as straight gas, straight electric or combination. All arms are made universal. If you want an inverted gas fixture use any arm on page 16. If you want a combination fixture add any electric arm on page 14, etc. Please notice casing used on these fixtures is $\frac{7}{8}$ -inch—that all canopies are four inches in diameter. That rich gilt, oxidized copper and brush brass are carried in stock and sold at no advance in price. The very finest workmanship and finish enter into these fixtures, and while the prices are low, they must not be confused with the ordinary goods now on the market.

INVERTED GAS ARMS

With the increasing popularity of the inverted light there comes the demand for a fixture which, when the light is hung upon it, will be symmetrical and artistic. To meet this demand we have designed a set of inverted arms that will fit any of the stems on pages 17, 18, giving you a complete line of inverted fixtures with little money invested. Cuts of these are shown on the following pages, Nos. 19, 20.
